

Tanisha Joshi

Full-Stack Developer · AI Engineer

Jaipur, India | tanishaj1605@gmail.com | +91 9063043718 | linkedin.com/in/zoniiscoding | github.com/zoniiscoding

Professional Summary

Computer Science Engineering graduate (2026) with hands-on experience building and shipping full-stack products end to end: React/TypeScript frontends, Python/FastAPI backends, relational and vector databases, and production-grade LLM/AI features. Practical experience with Retrieval-Augmented Generation (RAG), custom AI agents with structured tool-calling, and LoRA fine-tuning backed by rigorous, leakage-safe evaluation methodology. Comfortable across the stack, from database design and REST/WebSocket APIs to cloud deployment (Docker, GCP, Railway, Render, Vercel) and disciplined automated testing. Builder mindset developed through multiple self-initiated, fully shipped products as a startup co-founder.

Work Experience

Co-Founder & Full-Stack Developer zero2one labs 2026 – Present

- Built and shipped full-stack products from 0 to 1, owning React/TypeScript frontends, FastAPI backends, and database design end to end.
- Designed and integrated LLM-powered features, including RAG pipelines, custom AI agents, and fine-tuned models, into real client products.
- Deployed and maintained production services across Docker, GCP, Railway, Render, and Vercel, benchmarking infrastructure choices on cost and latency.
- Wrote clean, well-tested code enforced through CI-based linting and automated test suites, communicating technical trade-offs clearly to non-technical stakeholders.
- Picked up new tools and frameworks quickly as project needs changed, comfortable working across the entire stack without waiting for handoffs.

Technical Projects

CodeNaut RAG · AI Agents · Full-Stack

GitHub

React, TypeScript, Python, FastAPI, SQLAlchemy (Async), PostgreSQL, Redis, Qdrant, Docker

- Built a full-stack Retrieval-Augmented Generation (RAG) platform: a React/TypeScript frontend, a FastAPI backend, and a normalized PostgreSQL schema.
- Designed a custom AI agent with structured tool-calling and server-validated evidence IDs, embedding content into Qdrant with FastEmbed and Hugging Face Hub models.
- Used SQLAlchemy (async) and Alembic migrations for schema evolution, plus Redis-backed background jobs for longer-running tasks.
- Verified functionality with 332 automated tests (91.04% branch coverage) and Playwright end-to-end tests, containerized and deployed with Docker across Railway and GCP.

Anteroom LLM Fine-Tuning · Real-Time Systems

GitHub

Python, PyTorch, LoRA, Ollama, Groq (Llama 3.3 70B), React, FastAPI

- Fine-tuned an open-weight LLM (Qwen2.5-1.5B) with LoRA, designing a rigorous, leakage-safe evaluation methodology that cut scoring error from 5–7 points to under 2 (0–10 scale) and raised structured-output validity from 93% to 100%.
- Initially self-hosted the LLM via Ollama, migrating to Groq's hosted Llama 3.3 70B API after benchmarking revealed unacceptable inference latency for real-time use.
- Built a real-time, voice-based AI assistant coordinating REST and WebSocket APIs, with Google OAuth and signed session cookies for authentication.
- Deployed end to end across Render, Vercel, and Neon serverless Postgres, with Pytest and pytest-asyncio tests covering core service logic.

Plant Disease Detection System Machine Learning · Computer Vision

Academic Project

Python, TensorFlow, PyTorch, Scikit-learn, NumPy, Pandas

- Built and trained CNN classification models on 2,500+ images across 15+ classes, performing exploratory data analysis and statistical evaluation (accuracy, precision, recall) to diagnose and improve model performance.

Education

Manipal University Jaipur B.Tech in Computer Science Engineering, Minor in Cloud Computing

2022 – 2026

CGPA: 7.04

Relevant Coursework: Data Structures & Algorithms, Machine Learning, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks

Technical Skills

LLM & AI: OpenAI API, Groq, Ollama, RAG, AI Agents, Prompt Engineering, LoRA Fine-Tuning, Model Evaluation

Languages: Python, JavaScript, TypeScript, SQL, Java, C/C++

Front-End: React, TypeScript, Vite, HTML, CSS

Back-End & APIs: FastAPI, Node.js, Express.js, REST APIs, WebSockets

Databases: PostgreSQL, Redis, Qdrant, MongoDB, MySQL, SQL

Cloud & DevOps: Docker, GCP, Git, GitHub, CI/CD (GitHub Actions)

Data & ML: NumPy, Pandas, Scikit-learn, TensorFlow, PyTorch

Practices: Clean Code, Automated Testing, Independent Ownership, Technical Documentation

Competitive Programming & Problem Solving

LeetCode: Solved 175+ problems across arrays, strings, trees, graphs, dynamic programming, and greedy algorithms.

Certifications

Oracle Cloud Infrastructure 2025 Certified Foundations Associate | Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate |

Oracle Data Platform 2025 Certified Foundations Associate
